

## MoV 7D561K 500V High Voltage Varistor Zov 07D511 Resistor

Our Product Introduction

### Basic Information

- Place of Origin: Shenzhen, Guangdong, China
- Brand Name: SOCAY
- Certification: UL, REACH, RoHS, ISO
- Model Number: 07D561K/07D561KJ
- Minimum Order Quantity: 1000PCS
- Price: Negotiable
- Delivery Time: 5-8 work days

### Product Specification

- Product Name: Metal Oxide Varistor
- Package Type:  $\Phi 7\text{mm}$
- VAC: 320V
- VDC: 415V
- Varistor Voltage: 510(459~561)V
- IP: 10A
- VC: 845V
- Rated Power: 0.25W
- Typ. Capacitance: 100pF
- Highlight: **MoV 7D561K, High Voltage Varistor Zov, 500V High Voltage Varistor**

#### About Varistor

Varistor, referred to as MOV, is a voltage-sensitive nonlinear overvoltage protection semiconductor component. In order to adapt to the space size requirements of equipment miniaturization and meet the needs of functional upgrades, power supply, battery management and dedicated system functions all require highly integrated advanced solutions. These are major issues that should be solved for successful consumer electronics system design. . How to improve the circuit protection level of consumer electronics products? Can overvoltage device varistors be used for surge protection in consumer electronics? The working principle of the varistor is that it has high interference when there is no instantaneous overvoltage, but its impedance will continue to decrease as the surge current and voltage increase, and its current and voltage characteristics are strongly nonlinear.

#### What is the function of varistor?

The response time of the varistor is ns level, which is faster than the air discharge tube and slightly slower than the TVS tube. Generally, its response speed can meet the requirements for over-voltage protection of electronic circuits. The junction capacitance of a varistor is generally in the order of hundreds to thousands of Pf. In many cases, it is not suitable to be directly used in the protection of high-frequency signal lines. When used in the protection of AC circuits, its large junction capacitance will increase leakage. Current needs to be fully considered when designing protective circuits. The flow capacity of the varistor is larger, but smaller than that of the gas discharge tube.

#### Description:

The 07D series radial leaded varistors provides an ideal circuit protection solution for lower DC voltage applications by offering higher surge ratings than ever before available in such small discs.

The maximum peak surge current rating can reach up to 1.75KA (8/20  $\mu$ s pulse) to protect against high peak surges, including indirect lightning strike interference, system switching transients and abnormal fast transients from the power source.

#### Features:

- u Wide operating voltage (V1mA) range from 18V to 820V
- u Fast responding to transient over-voltage
- u Large absorbing transient energy capability
- u Low clamping ratio and no following-on current
- u Meets MSL level 1, per J-STD-020

#### Applications:

Power supply systems, surge suppressors, security systems, motor protection, automotive electronic systems, household appliances etc

<b>Material</b>	No Radioactive Material
<b>Operating Temperature</b>	-40 ~ +85

Storage Temperature	-55 ~ +125
Body	Nickel Plated
Leads	Tin Plated
Devices with No lead	Nickel Plated

#### Electrical Rating

Item	Test Condition / Description	Requirement																								
Maximum Allowable Voltage	The recommended maximum sine wave voltage (RMS) or the maximum DC voltage can be applied continuously.	To meet the specified value																								
Varistor Voltage	The voltage between two terminals with the specified measuring current 1mA.DC applied is call Vb.																									
Maximum Clamping Voltage	The maximum voltage between two terminals with the specification standard impulse current. Applied waveform: 8/20μs 																									
Rated Wattage	The maximum average power that can be applied within the specified ambient temperature.																									
Energy	The maximum energy within the varistor voltage change of ±10% when one impulse of 10/1000μs. or 2 msec. is applied.																									
Withstanding Surge Current	The maximum current within the varistor voltage change of ±10% with the standard impulse current (8/20μs.) applied one time	ΔVb / Vb ≤ ±10%																								
Varistor Voltage Temp. Coefficient	$\frac{V_b \text{ at } 20^{\circ}\text{C} - V_b \text{ at } 70^{\circ}\text{C}}{V_b \text{ at } 20^{\circ}\text{C}} \times \frac{1}{50} \times 100(\% / ^{\circ}\text{C})$																									
Surge Life	The change of Vb shall be measured after the impulse listed below is applied 10,000 times continuously with the interval of ten seconds at room temperature. <table border="1" data-bbox="427 996 928 1249"> <tbody> <tr> <td rowspan="2">5D Series</td><td>180K to 680K</td><td>10A (8/20μs)</td></tr> <tr> <td>820K to 751K</td><td>20A (8/20μs)</td></tr> <tr> <td rowspan="2">7D Series</td><td>180K to 680K</td><td>25A (8/20μs)</td></tr> <tr> <td>820K to 821K</td><td>50A (8/20μs)</td></tr> <tr> <td rowspan="2">10D Series</td><td>180K to 680K</td><td>50A (8/20μs)</td></tr> <tr> <td>820K to 112K</td><td>100A (8/20μs)</td></tr> <tr> <td rowspan="2">14D Series</td><td>180K to 680K</td><td>75A (8/20μs)</td></tr> <tr> <td>820K to 182K</td><td>150A (8/20μs)</td></tr> <tr> <td rowspan="2">20D Series</td><td>180K to 680K</td><td>100A (8/20μs)</td></tr> <tr> <td>820K to 182K</td><td>200A (8/20μs)</td></tr> </tbody> </table>		5D Series	180K to 680K	10A (8/20μs)	820K to 751K	20A (8/20μs)	7D Series	180K to 680K	25A (8/20μs)	820K to 821K	50A (8/20μs)	10D Series	180K to 680K	50A (8/20μs)	820K to 112K	100A (8/20μs)	14D Series	180K to 680K	75A (8/20μs)	820K to 182K	150A (8/20μs)	20D Series	180K to 680K	100A (8/20μs)	820K to 182K
